

ORAL HEALTH PAVILION CENTRAL STERILIZATION FACILITY

RBHS Campus

Renovation

Teaching/Research

The Project Scope:

The 4,100 square foot, \$5.6 million project relocates the School of Dental Medicine’s Central Sterilization Facility to the Oral Health Pavilion A-Level, from its current location in the Bergen Street Pavilion D-Level. The new space will consist of a decontamination room, prep pack room, and sterile storage room. The space will be equipped with ultrasonic cleaners, steam sterilizers, cart washers, and utensil washers.

Academic Program Benefits:

The proper sterilization of equipment is critical to the School of Dental Medicine’s mission of improving oral health, the education of health professionals and scientists, and the promotion of good health, and delivery of oral care throughout the communities served..

The current sterilization facility for the School of Dental Medicine is operating at over 100 percent capacity, the equipment is outdated, and the infrastructure does not allow for expanding the existing location. The new equipment will support the entire School of Dental Medicine, as well as providing the school, research, and clinical care units with modern sterilization processes.
